

The Planetary Society

What's on the Web

planetary.org—Space Exploration at Your Fingertips

The Planetary Society's website, planetary.org, is your resource for what is going on in space exploration and how you can become more involved.

Here's some of what you'll find on planetary.org:

Our Projects

planetary.org/programs

The Planetary Society creates ways for the public to have active roles in space exploration. We develop innovative technologies, like the first solar sail spacecraft, we fund astronomers hunting for hazardous asteroids and planets orbiting other stars, we support radio and optical searches for extraterrestrial life, and we influence decision makers, ensuring the future of space exploration.

The Planetary Society Blog

planetary.org/blog

The Planetary Society blog is your guide to interesting stuff going on in space science, space exploration, and space advocacy. Blogger Emily Lakdawalla breaks down the latest space news in fun and easy to understand ways.

Planetary Radio

planetary.org/radio

Each week, Planetary Radio visits with a scientist, engineer, project manager, advocate or writer who can provide a unique perspective on the quest for knowledge about our solar system and beyond. We also showcase regular features that raise your space IQ while they put a smile on your face.

Explore

planetary.org/explore

Take a journey through space. Visit the planets, moons, asteroids, and comets that wander our planetary neighborhood and learn about the spacecraft that send us information and images about our solar system. Then, look beyond—explore newly-discovered planets orbiting other stars and search for life beyond Earth.

Participate

planetary.org/participate

Do more in space exploration. The Planetary Society finds fun ways to get involved. Get active and volunteer, attend space events in your local area, participate in space-related contests, and help spread the adventure of space with the next generation.

Take Action

planetary.org/action

Through active grassroots campaigns, Planetary Society members influence political decisions and ensure future space exploration. We successfully fought for a mission to Pluto, we're fighting to save Voyager and Hubble, and urging space agencies to develop a mission to Europa. By making our collective voice heard in the world's governments and space agencies, we make exploration happen.
